

RC CareChair

Bariatric Transfer Chair

A single solution for your bariatric patients' mobility and safer transfer

Transferring and mobilizing bariatric patients can be quite a challenge, but with the RC CareChair, it does not have to be. This convertible transfer chair adjusts from full upright sitting position to full stretcher and all points in between to facilitate a lateral transfer. During an emergency, The RC CareChair converts from the chair to stretcher quickly and easily making it indispensable in an ICU, CCU or emergency room. With motorized tilt-in-space, the RC CareChair provides effortless repositioning. When tilted back, the chair supplies a more secure and comfortable sitting position and when tilted forward, it can aid the patient in standing from a seated position. The full range of motion offers maximum patient comfort for those with respiratory conditions, head and neck injuries or orthopedic disorders.
