

Safe T Drive *Self Propelled Bed Transport System*

The single lever, variable speed control is easy to operate, and the Safe T Stop button assures optimum safety, even in reverse.

There has never been a less strenuous way to transport your patients

It has been reported that 59% of all nursing injuries are due to overexertion. While new technologies allow for better diagnostic testing and therapeutic interventions, they increase the need for transporting patients to multiple departments and specialized units. The Safe T Drive self propelled bed system easily navigates inclines and ramps, and fits through almost all hospital room doors and elevators. The Safe T Drive is available for the RC 1000 Ultra or RC MedSurg beds and reduces the number of staff required, waiting times, equipment costs, and eliminates the risk of injury associated with transporting your patients.
